Serge A Urakhchin

Full Stack Engineer (Angular, AWS, SaaS Systems)

Skills

Frontend Engineering:

Angular (21), TypeScript, RxJS, Angular Material, Responsive UI Architecture, Async UI Workflows, Rapid UI Prototyping, Flexbox Layout Systems, UX-Oriented Frontend Engineering, Performance Optimization

Full Stack & API Design:

REST API Architecture, Async Data Flows, Client–Server Systems Integration, OAuth 2.0 Authentication, Session & State Coordination, Distributed Frontend–Backend Workflows

Cloud & Backend:

AWS Lambda, API Gateway, DynamoDB, S3, CloudWatch, Route 53, Node.js, Serverless Architecture, Cloud-Native Deployment Workflows, Infrastructure-as-Code Concepts, Reproducible Cloud Systems

Tooling & DevOps:

Git, GitHub Actions, One-Click CI/CD Deployment, Infrastructure-as-Code Workflows, Automated Cloud Deployment, Logging & Monitoring

Databases:

DynamoDB, RDS, SQL

Experience

January 2026 - Present [githubcanvas.com](#) **Personal Project (Full Stack Developer)**

- Built an end-to-end SaaS platform enabling users to programmatically generate GitHub contribution graph art.
- Designed and implemented full-stack architecture using Angular (21), AWS Lambda, API Gateway, and DynamoDB.
- Developed OAuth 2.0 authentication with GitHub, implementing secure session management via HTTP cookies and handling browser constraints.
- Architected REST APIs and middleware using Node.js, AWS Lambda, and API Gateway with custom domain routing via Route 53.
- Designed scalable data model for user sessions and drawing persistence using DynamoDB.
- Implemented one-click frontend CI/CD deployment pipeline using GitHub Actions and automated deployment to GitHub Pages.
- Refactoring backend architecture toward version-controlled serverless infrastructure and Infrastructure-as-Code deployment workflows.

January 2023 - January 2026 [inovalon.com](https://www.inovalon.com) **Senior Software Engineer L4**

- Led Angular 8/14 frontend development across enterprise healthcare dashboards, owning UI architecture decisions, product demos, and delivery coordination across multiple teams.
- Implemented complex async REST workflows across frontend, middleware, and backend systems, handling large-scale healthcare data flows, API integration patterns, and UI state coordination.
- Worked closely with product, middleware, cloud, and data teams to align frontend application behavior with API contracts, release timelines, and evolving business requirements.
- Developed enterprise-scale dashboard systems used by national health plans, focusing on intuitive frontend workflows, rapid UI iteration, high-volume data consumption, and practical user experience design.
- Owned frontend deployment coordination across dev, QA, and production environments, leading release validation, production rollout communication, and cross-team delivery execution.
- Specialized in debugging complex frontend behaviors, async UI workflows, and deployment issues across large Angular applications.

May 2022 - January 2023 [deloitte.com](https://www.deloitte.com) **Junior Solution Analyst**

- Angular 12 frontend development using Ag-Grid, RxJS, Angular Material, and Ngx-Timeline within enterprise healthcare dashboard applications.
- Developed healthcare data analytics dashboards under an internal consulting team supporting government healthcare initiatives.
- Built foundational experience working within enterprise consulting environments and cross-team healthcare projects.

Feb 2021 - May 2022 [gpsshooter.com](https://www.gpsshooter.com) **Personal Project (Full Stack Developer)**

- Built a realtime location-based web application using Angular, Socket.io, Node.js, and AWS EC2.
- Integrated browser Geolocation, Device Orientation, and Google Maps APIs to create mobile interactive gameplay workflows.
- Architected HTTPS-enabled Socket.io client/server communication for realtime multiplayer synchronization, device sensor interaction, and low-latency gameplay state updates.

Oct 2017 – Jan 2020 [drugviu.com](https://www.drugviu.com) **Healthcare Startup Full Stack Web Developer**

- Angular 7 development: generating, serving, building, testing, and deploying
- Angular Material, Bootstrap, RXJS observables in services and components
- AWS Serverless Development: EC2, S3, DynamoDB, API Gateway, Lambda
- API middleware routing using Node/Express/EC2/Lambda

Work Authorization: USA Citizen

Apr – Jun 2016 DePaul HTML5 & JavaScript Program **Student**

- Created a website with custom CSS, HTML, jQuery
- Updated JavaScript forms to pull city data from an API using AJAX

Feb 2015 – May 2017 Coursera Full Stack Web Specialization **Student**

- Created a responsive static website with Bootstrap
- Created a static single page application with the Angular framework
- Build a backend application with a full-fledged REST API Express MongoDB server
